

Contents

PART I Signals and Systems

- 1 Fourier Series, Fourier Transforms, and the DFT *W. Kenneth Jenkins*
- 2 Ordinary Linear Differential and Difference Equations *B.P. Lathi*
- 3 Finite Wordlength Effects *Bruce W. Bomar*

PART II Signal Representation and Quantization

- 4 On Multidimensional Sampling *Ton Kalker*
- 5 Analog-to-Digital Conversion Architectures *Stephen Kosonocky and Peter Xiao*
- 6 Quantization of Discrete Time Signals *Ravi P. Ramachandran*

PART III Fast Algorithms and Structures

- 7 Fast Fourier Transforms: A Tutorial Review and a State of the Art *P. Duhamel and M. Vetterli*
- 8 Fast Convolution and Filtering *Ivan W. Selesnick and C. Sidney Burrus*
- 9 Complexity Theory of Transforms in Signal Processing *Ephraim Feig*
- 10 Fast Matrix Computations *Andrew E. Yagle*
- 11 Digital Filtering *Lina J. Karam, James H. McClellan, Ivan W. Selesnick, and C. Sidney Burrus*

PART V Statistical Signal Processing

- 12 Overview of Statistical Signal Processing *Charles W. Therrien*
- 13 Signal Detection and Classification *Alfred Hero*
- 14 Spectrum Estimation and Modeling *Petar M. Djurić and Steven M. Kay*
- 15 Estimation Theory and Algorithms: From Gauss to Wiener to Kalman *Jerry M. Mendel*
- 16 Validation, Testing, and Noise Modeling *Jitendra K. Tugnait*
- 17 Cyclostationary Signal Analysis *Georgios B. Giannakis*

PART VI Adaptive Filtering

- 18 Introduction to Adaptive Filters *Scott C. Douglas*
- 19 Convergence Issues in the LMS Adaptive Filter *Scott C. Douglas and Markus Rupp*
- 20 Robustness Issues in Adaptive Filtering *Ali H. Sayed and Markus Rupp*
- 21 Recursive Least-Squares Adaptive Filters *Ali H. Sayed and Thomas Kailath*
- 22 Transform Domain Adaptive Filtering *W. Kenneth Jenkins and Daniel F. Marshall*
- 23 Adaptive IIR Filters *Geoffrey A. Williamson*
- 24 Adaptive Filters for Blind Equalization *Zhi Ding*

PART VII Inverse Problems and Signal Reconstruction

- 25 Signal Recovery from Partial Information *Christine Podilchuk*
- 26 Algorithms for Computed Tomography *Gabor T. Herman*
- 27 Robust Speech Processing as an Inverse Problem *Richard J. Mammone and Xiaoyu Zhang*
- 28 Inverse Problems, Statistical Mechanics and Simulated Annealing *K. Venkatesh Prasad*
- 29 Image Recovery Using the EM Algorithm *Jun Zhang and Aggelos K. Katsaggelos*
- 30 Inverse Problems in Array Processing *Kevin R. Farrell*
- 31 Channel Equalization as a Regularized Inverse Problem *John F. Doherty*
- 32 Inverse Problems in Microphone Arrays *A.C. Surendran*
- 33 Synthetic Aperture Radar Algorithms *Clay Stewart and Vic Larson*
- 34 Iterative Image Restoration Algorithms *Aggelos K. Katsaggelos*

PART VIII Time Frequency and Multirate Signal Processing

- 35 Wavelets and Filter Banks *Cormac Herley*
- 36 Filter Bank Design *Joseph Arrowood, Tami Randolph, and Mark J.T. Smith*
- 37 Time-Varying Analysis-Synthesis Filter Banks *Iraj Sodagar*
- 38 Lapped Transforms *Ricardo L. de Queiroz*

PART IX Digital Audio Communications

- 39 Auditory Psychophysics for Coding Applications *Joseph L. Hall*
- 40 MPEG Digital Audio Coding Standards *Peter Noll*
- 41 Digital Audio Coding: Dolby AC-3 *Grant A. Davidson*
- 42 The Perceptual Audio Coder (PAC) *Deepen Sinha, James D. Johnston, Sean Dorward, and Schuyler R. Quackenbush*
- 43 Sony Systems *Kenzo Akagiri, M.Katakura, H. Yamauchi, E. Saito, M. Kohut, Masayuki Nishiguchi, and K. Tsutsui*

PART X Speech Processing

- 44 Speech Production Models and Their Digital Implementations *M. Mohan Sondhi and Juergen Schroeter*
- 45 Speech Coding *Richard V. Cox*
- 46 Text-to-Speech Synthesis *Richard Sproat and Joseph Olive*
- 47 Speech Recognition by Machine *Lawrence R. Rabiner and B. H. Juang*
- 48 Speaker Verification *Sadaoki Furui and Aaron E. Rosenberg*
- 49 DSP Implementations of Speech Processing *Kurt Baudendistel*
- 50 Software Tools for Speech Research and Development *John Shore*

PART XI Image and Video Processing

- 51 Image Processing Fundamentals *Ian T. Young, Jan J. Gerbrands, and Lucas J. van Vliet*
- 52 Still Image Compression *Tor A. Ramstad*
- 53 Image and Video Restoration *A. Murat Tekalp*
- 54 Video Scanning Format Conversion and Motion Estimation *Gerard de Haan*

- 55 Video Sequence Compression *Osama Al-Shaykh, Ralph Neff, David Taubman, and Avideh Zakhor*
- 56 Digital Television *Kou-Hu Tzou*
- 57 Stereoscopic Image Processing *Reginald L. Lagendijk, Ruggero E.H. Franich, and Emile A. Hendriks*
- 58 A Survey of Image Processing Software and Image Databases *Stanley J. Reeves*
- 59 VLSI Architectures for Image Communications *P. Pirsch and W. Gehrke*

PART XII Sensor Array Processing

- 60 Complex Random Variables and Stochastic Processes *Daniel R. Fuhrmann*
- 61 Beamforming Techniques for Spatial Filtering *Barry Van Veen and Kevin M. Buckley*
- 62 Subspace-Based Direction Finding Methods *Egemen Gonen and Jerry M. Mendel*
- 63 ESPRIT and Closed-Form 2-D Angle Estimation with Planar Arrays *Martin Haardt, Michael D. Zoltowski, Cherian P. Mathews, and Javier Ramos*
- 64 A Unified Instrumental Variable Approach to Direction Finding in Colored Noise Fields *P. Stoica, M. Viberg, M. Wong, and Q. Wu*
- 65 Electromagnetic Vector-Sensor Array Processing *Arye Nehorai and Eytan Paldi*
- 66 Subspace Tracking *R.D. DeGroat, E.M. Dowling, and D.A. Linebarger*
- 67 Detection: Determining the Number of Sources *Douglas B. Williams*
- 68 Array Processing for Mobile Communications *A. Paulraj and C. B. Papadias*
- 69 Beamforming with Correlated Arrivals in Mobile Communications *Victor A.N. Barroso and José M.F. Moura*
- 70 Space-Time Adaptive Processing for Airborne Surveillance Radar *Hong Wang*

PART XIII Nonlinear and Fractal Signal Processing

- 71 Chaotic Signals and Signal Processing *Alan V. Oppenheim and Kevin M. Cuomo*
- 72 Nonlinear Maps *Steven H. Isabelle and Gregory W. Wornell*
- 73 Fractal Signals *Gregory W. Wornell*
- 74 Morphological Signal and Image Processing *Petros Maragos*
- 75 Signal Processing and Communication with Solitons *Andrew C. Singer*
- 76 Higher-Order Spectral Analysis *Athina P. Petropulu*

PART XIV DSP Software and Hardware

- 77 Introduction to the TMS320 Family of Digital Signal Processors *Panos Papamichalis*
- 78 Rapid Design and Prototyping of DSP Systems *T. Egolf, M. Pettigrew, J. Debardeleben, R. Hezar, S. Famorzadeh, A. Kavipurapu, M. Khan, Lan-Rong Dung, K. Balemarchy, N. Desai, Yong-kyu Jung, and V. Madisetti*

To our families

Preface

Digital Signal Processing (DSP) is concerned with the theoretical and practical aspects of representing information bearing signals in digital form and with using computers or special purpose digital hardware either to extract that information or to transform the signals in useful ways. Areas where digital signal processing has made a significant impact include telecommunications, man-machine communications, computer engineering, multimedia applications, medical technology, radar and sonar, seismic data analysis, and remote sensing, to name just a few.

During the first fifteen years of its existence, the field of DSP saw advancements in the basic theory of discrete-time signals and processing tools. This work included such topics as fast algorithms, A/D and D/A conversion, and digital filter design. The past fifteen years has seen an ever quickening growth of DSP in application areas such as speech and acoustics, video, radar, and telecommunications. Much of this interest in using DSP has been spurred on by developments in computer hardware and microprocessors. *Digital Signal Processing Handbook CRCnetBASE* is an attempt to capture the entire range of DSP: from theory to applications — from algorithms to hardware.

Given the widespread use of DSP, a need developed for an authoritative reference, written by some of the top experts in the world. This need was to provide information on both theoretical and practical issues suitable for a broad audience — ranging from professionals in electrical engineering, computer science, and related engineering fields, to managers involved in design and marketing, and to graduate students and scholars in the field. Given the large number of excellent introductory texts in DSP, it was also important to focus on topics useful to the engineer or scholar without overemphasizing those aspects that are already widely accessible. In short, we wished to create a resource that was relevant to the needs of the engineering community and that will keep them up-to-date in the DSP field.

A task of this magnitude was only possible through the cooperation of many of the foremost DSP researchers and practitioners. This collaboration, over the past three years, has resulted in a CD-ROM containing a comprehensive range of DSP topics presented with a clarity of vision and a depth of coverage that is expected to inform, educate, and fascinate the reader. Indeed, many of the articles, written by leaders in their fields, embody unique visions and perceptions that enable a quick, yet thorough, exposure to knowledge garnered over years of development.

As with other CRC Press handbooks, we have attempted to provide a balance between essential information, background material, technical details, and introduction to relevant standards and software. The Handbook pays equal attention to theory, practice, and application areas. *Digital Signal Processing Handbook CRCnetBASE* can be used in a number of ways. Most users will look up a topic of interest by using the powerful search engine and then viewing the applicable chapters. As such, each chapter has been written to stand alone and give an overview of its subject matter while providing key references for those interested in learning more. *Digital Signal Processing Handbook CRCnetBASE* can also be used as a reference book for graduate classes, or as supporting material for continuing education courses in the DSP area. Industrial organizations may wish to provide the CD-ROM with their products to enhance their value by providing a standard and up-to-date reference source.

We have been very impressed with the quality of this work, which is due entirely to the contributions of all the authors, and we would like to thank them all. The Advisory Board was instrumental in helping to choose subjects and leaders for all the sections. Being experts in their fields, the section leaders provided the vision and fleshed out the contents for their sections.

Finally, the authors produced the necessary content for this work. To them fell the challenging task of writing for such a broad audience, and they excelled at their jobs.

In addition to these technical contributors, we wish to thank a number of outstanding individuals whose administrative skills made this project possible. Without the outstanding organizational skills of Elaine M. Gibson, this handbook may never have been finished. Not only did Elaine manage the paperwork, but she had the unenviable task of reminding authors about deadlines and pushing them to finish. We also thank a number of individuals associated with the CRC Press Handbook Series over a period of time, especially Joel Claypool, Dick Dorf, Kristen Maus, Jerry Papke, Ron Powers, Suzanne Lassandro, and Carol Whitehead.

We welcome you to this handbook, and hope you find it worth your interest.

Vijay K. Madisetti and Douglas B. Williams

Editors

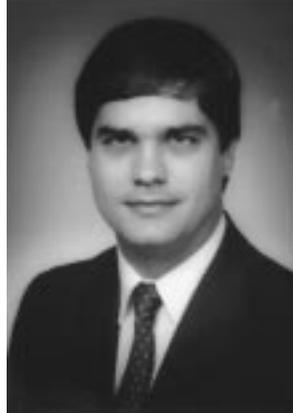

Vijay K. Madisetti is an Associate Professor in the School of Electrical and Computer Engineering at Georgia Institute of Technology in Atlanta. He teaches undergraduate and graduate courses in signal processing and computer engineering, and is affiliated with the Center for Signal and Image Processing (CSIP) and the Microelectronics Research Center (MiRC) on campus. He received his B. Tech (honors) from the Indian Institute of Technology (IIT), Kharagpur, in 1984, and his Ph.D. from the University of California at Berkeley, in 1989, in electrical engineering and computer sciences.

Dr. Madisetti is active professionally in the area of signal processing, having served as an Associate Editor of the *IEEE Transactions on Circuits and Systems II*, the *International Journal in Computer Simulation*, and the *Journal of VLSI Signal Processing*. He has authored, co-authored, or edited six books in the areas of signal processing and computer engineering, including *VLSI Digital Signal Processors* (IEEE Press, 1995), *Quick-Turnaround ASIC Design in VHDL* (Kluwer, 1996), and a CD-ROM tutorial on VHDL (IEEE Standards Press, 1997). He serves as the IEEE Press Signal Processing Society liaison, and is counselor to Georgia Tech's IEEE Student Chapter, which is one of the largest in the world with over 600 members in 1996. Currently, he is serving as the Technical Director of DARPA's RASSP Education and Facilitation program, a multi-university/industry effort to develop a new digital systems design education curriculum.

Dr. Madisetti is a frequent consultant to industry and the U.S. government, and also serves as the President and CEO of VP Technologies, Inc., Marietta, GA., a corporation that specializes in rapid prototyping, virtual prototyping, and design of embedded digital systems. Dr. Madisetti's home page URL is at <http://www.ee.gatech.edu/users/215/index.html>, and he can be reached at vkm@ee.gatech.edu.

Douglas B. Williams received the B.S.E.E. degree (summa cum laude), the M.S. degree, and the Ph.D. degree, in electrical and computer engineering from Rice University, Houston, Texas in 1984, 1987, and 1989, respectively. In 1989, he joined the faculty of the School of Electrical and Computer Engineering at the Georgia Institute of Technology, Atlanta, Georgia, where he is currently an Associate Professor. There he is also affiliated with the Center for Signal and Image Processing (CSIP) and teaches courses in signal processing and telecommunications.

Dr. Williams has served as an Associate Editor of the *IEEE Transactions on Signal Processing* and was on the conference committee for the 1996 International Conference on Acoustics, Speech, and Signal Processing that was held in Atlanta. He is currently the faculty counselor for Georgia Tech's student chapter of the IEEE Signal Processing Society. He is a member of the Tau Beta Pi, Eta Kappa Nu, and Phi Beta Kappa honor societies.

Dr. Williams's current research interests are in statistical signal processing with emphasis on radar signal processing, communications systems, and chaotic time-series analysis. More information on his activities may be found on his home page at <http://dogbert.ee.gatech.edu/users/276>. He can also be reached at dbw@ee.gatech.edu.
