

# Contents

<i>Foreword</i> .....	vi
<i>Introduction</i> .....	viii
<i>Acknowledgments</i> .....	xiii
<b>Part I. Adaptive Cancellation of Clutter</b>	
1. Adaptive Implementation of the Optimum Radar Signal Processor .....	1
2. Application of Gram-Schmidt Algorithm to Optimum Radar Signal Processing .....	11
3. The Gram-Schmidt Sidelobe Canceller .....	18
4. Adaptive Methods to Implement the Optimum Radar Signal Processor .....	23
5. The Maximum Entropy Method and Its Application to Clutter Cancellation .....	29
6. Performance Comparison of Optimum and Conventional MTI and Doppler Processors .....	39
7. Radar Detection of Correlated Targets in Clutter .....	48
<b>Part II. Detection Theory for Non-Gaussian Distributed Targets and Clutter Signals</b>	
8. Coherent Radar Detection in Log-normal Clutter .....	68
9. Advanced Models of Targets, Disturbances and Related Radar Signal Processors .....	84
10. Radar Detection of Target Signals in Non-Gaussian Clutter: Theory and Applications .....	92
11. Theory of Radar Detection in Coherent Weibull Clutter .....	100
<b>Part III. Detection for Multistatic Radar Systems</b>	
12. Optimum and Sub-optimum Processors for Multistatic Radar Systems .....	117
13. Multistatic Radar Detection: Synthesis and Comparison of Optimum and Suboptimum Receivers .....	125
14. Survey on Multistatic Radar Detection .....	136
15. Multistatic Detection of Radar Signals for Swerling Models of the Target .....	143
16. Overview of Detection Theory in Multistatic Radar .....	150
<b>Part IV. Techniques for Surveillance Radars</b>	
17. Surveillance Radars: State of the Art, Research and Perspectives .....	161
18. A Review of CFAR Detection Techniques in Radar Systems .....	179
19. Synthesis and Evaluation of Phase Codes for Pulse Compression Radar .....	186
